SAFETY DATA SHEET

This Safety Data Sheet (SDS) is for welding consumables and related products and may be used to comply with the European Parliament and Council Regulation (EC) No 1907/2006 (known as REACH) and Regulation (EC) No 1272/2008 (known as CLP), which adapted the REACH provisions regarding Safety Data Sheets to comply with the United Nations’ Globally Harmonised System (GHS, fifth version) for classifying and labelling chemical substances and mixtures. The REACH and CLP regulations must be consulted for specific requirements. This Safety Data Sheet complies with ISO 11014-1. This document is translated in several languages and is available on our website at www.hobartbrothers.com, from your sales representative or by calling customer service at 1 (937) 332-4000.

SECTION 1 – IDENTIFICATION OF THE SUBSTANCE /MIXTURE AND OF THE COMPANY /UNDERTAKING

1.1 PRODUCT IDENTIFIER

Products Type: CARBON AND LOW ALLOY STEEL SUBMERGED ARC WELDING (SAW) SOLID WIRE

Trade Name: SDX S1-EL12, EM13K, S2, S2Si-EM12K, S2Mo-EA2, S3-HE10K, S3Si-HE12K, S3Mo-EA4, S4-HE14, CrMo2-EB2R, CrMo2-EB3R, S2Ni1-ENi1, S2Ni2-ENi2, S2Ni1Cu, S3NiMo0.2-ENi5, S3NiMo-EF3, S3Ni2.5CrMo, S3TiMo2, S3MoTiB

1.2 RELEVANT IDENTIFIED USES OF THE SUBSTANCE OR MIXTURE AND USES ADVISED AGAINST

Product Use: CARBON AND LOW ALLOY STEEL SUBMERGED ARC WELDING (SAW) SOLID WIRE

Uses Advised Against: Use only as indicated for welding operations.

1.3 DETAILS OF THE SUPPLIER OF THE SAFETY DATA SHEET

Name: HOBART BROTHERS LLC

Address: 101 TRADE SQUARE EAST, TROY, OH 45373

United States

Website: www.hobartbrothers.com

Competent Person Responsible for the SDS: [David.Castro@HobartBrothers.com]

1.4 EMERGENCY TELEPHONE NUMBER

Telephone No: +1 (937) 332-4000 [Extended from 8 am to 5 pm – Eastern US Time Zone]

Emergency No: +1 (800) 424-9300 [Chemtrec Day or Night, within USA and Canada: 1-800-424-9300 CCN11662]

[Outside USA and Canada: +1-703-527-3887 (collect calls accepted)]

SECTION 2 – HAZARDS IDENTIFICATION

2.1 CLASSIFICATION OF THE SUBSTANCE OR MIXTURE – This product described in Section 1 is not classified as hazardous according to applicable GHS hazard classification criteria as required and defined in European Parliament and Council Regulations (EC) No 1907/2006 and (EC) No 1272/2008.

2.2 LABEL ELEMENTS

Hazard Pictogram – No symbol required

Signal Word – No signal word required

Hazard Statement – Not applicable

Precautionary Statement – Not applicable

2.3 OTHER HAZARDS

WARNING! - Avoid breathing welding fumes and gases; they may be dangerous to your health. Always use adequate ventilation. Always use appropriate personal protective equipment.

PRIMARY ROUTES OF ENTRY: Respiratory System, Eyes and/or Skin.

ARC RAYS: The welding arc can injure eyes and burn skin.

ELECTRIC SHOCK: Arc welding and associated processes can kill. See Section 8.

FUMES AND GASES: Can be dangerous to your health.

Welding fumes and gases cannot be classified simply. The composition and quantity of both are dependent upon the metal being welded, the process, procedures and electrodes used. Most fume ingredients are present as complex oxides and compounds and not as pure metals. When the electrode is consumed, the fume and gas decomposition products generated are different in percent and form from the ingredients listed in Section 3. Decomposition products of normal operation include those originating from the volatilization, reaction or oxidation of the materials shown in Section 3 of this Safety Data Sheet, plus those from the welding flux, the base metal and any coatings, etc. Monitor for the component materials identified in the list in Section 3.

Fumes from the use of this product may contain complex oxides or compounds of the following elements and molecules: amorphous silica fume, chromium, copper, manganese, nickel and silica. Other reasonably expected constituents of the fume would also include complex oxides of iron, titanium, silicon and molybdenum. Gaseous reaction products may include carbon monoxide and carbon dioxide. Ozone and nitrogen oxides may be formed by the radiation from the arc. Other conditions which also influence the composition and quantity of the fumes and gases to which workers may be exposed include: coatings on the metal being welded (such as paint, plating or galvanizing), the number of welders and the volume of the work area, the quality and amount of ventilation, the position of the welder’s head with respect to the fume plume, as well as the presence of contaminants in the atmosphere (such as chlorinated hydrocarbon vapors from cleaning and degreasing activities). One recommended way to determine the composition and quantity of fumes and gases to which workers are exposed is to take an air sample inside the welder’s helmet if worn or in the worker’s breathing zone.

SECTION 3 – COMPOSITION/INFORMATION ON INGREDIENTS

3.2 MIXTURES

IMPORTANT - This section covers the hazardous materials from which this product is manufactured. This data has been classified according to the criteria of the Globally Harmonised System of Classification and Labelling of Chemicals (GHS) as required and defined in European Parliament and Council Regulations (EC) No 1907/2006 and (EC) No 1272/2008. The fumes and gases produced during welding with normal use of this product are addressed in Section 8.

(13) Respiratory sensitization (Cat. 1, Sub-cat. 1A and 1B)  
F – European Inventory of Existing Commercial Chemical Substances Number --- Dashes indicate the ingredient is not present within the group of products

### SECTION 4 – FIRST AID MEASURES

#### 4.1 DESCRIPTION OF FIRST AID MEASURES

**Ingestion:** Not an expected route of exposure. Do not eat, drink, or smoke while welding; wash hands thoroughly before performing these activities. If symptoms develop, seek medical attention at once.

**Inhalation during welding:** If breathing is difficult, provide fresh air and contact physician. If breathing has stopped, perform artificial respiration and obtain medical assistance at once.

**Skin Contact during welding:** Remove contaminated clothing and wash the skin thoroughly with soap and water. If symptoms develop, seek medical attention at once.

**Eye Contact during welding:** Dust or fume from this product should be flushed from the eyes with copious amounts of clean, tepid water until victim is transported to an emergency medical facility. Do not allow victim to rub or keep eyes tightly closed. Obtain medical assistance at once. Arc rays can injure eyes. If exposed to arc rays, move victim to dark room, remove contact lenses as necessary for treatment, cover eyes with a padded dressing and rest. Obtain medical assistance if symptoms persist.

**4.2 MOST IMPORTANT SYMPTOMS AND EFFECTS, BOTH ACUTE AND DELAYED**

No adverse effects are expected from welding consumables (wire and rods) until they are welded. Inhalation of welding fumes may cause dizziness, nausea, or dryness or irritation of nose, throat, or eyes. Arc rays may injure eyes and burn skin. Hexavalent chromium compounds, nickel metal and compounds and respirable crystalline silica are listed as a human carcinogen in the International Agency for Research on Cancer (IARC) Monographs. Prolonged or repeated exposure to welding fumes causes damage to respiratory system, teeth and bones. Prolonged or repeated exposure to welding fumes may cause damage to brain and nervous system. Prolonged or repeated exposure to welding fumes may cause siderosis (iron deposits in lungs), liver or kidney damage, skin and respiratory sensitization (allergic reaction) and affect pulmonary function.

**4.3 INDICATION OF ANY IMMEDIATE MEDICAL ATTENTION AND SPECIAL TREATMENT NEEDED**

**Specific Treatment:** If eye or skin burns occur, get immediate medical attention. **Notes for the doctor:** Treat symptomatically.

Section 11 of this SDS covers the acute effects of overexposure to the various ingredients within the welding consumable. Section 8 of this SDS lists the exposure limits and covers methods for protecting yourself and your co-workers.

### SECTION 5 – FIRE-FIGHTING MEASURES

#### 5.1 EXTINGUISHING MEDIA

**Suitable Extinguishing Media:** Use a suitable extinguishing agent for a surrounding fire.

**Unsuitable Extinguishing Media:** None known.

**5.2 SPECIAL HAZARDS ARISING FROM THE SUBSTANCE OR MIXTURE**

Welding consumables applicable to this sheet as shipped are nonreactive, nonflammable, non-explosive and essentially nonhazardous until welded. Welding arcs and sparks can ignite combustibles and flammable products. If there are flammable materials, including fuel or hydraulic lines, in the work area and the worker cannot move the work or the flammable material, a fire-resistant shield such as a piece of sheet metal or fire resistant blanket should be placed over the flammable material. If welding work is conducted within 10 meters (~35 feet) or so of flammable materials, station a responsible person in the work zone to act as fire watcher to observe where sparks are flying and to grab an extinguisher or sound the alarm if needed. Unused welding consumables may remain hot for a period of time after completion of a welding process.

### SECTION 6 – ACCIDENTAL RELEASE MEASURES

#### 6.1 PERSONAL PRECAUTIONS, PROTECTIVE EQUIPMENT, AND EMERGENCY PROCEDURES

Not applicable to solid metal/welding electrodes in massive form. During use of product in a welding process, wear personal protective equipment as specified in Section 8. Avoid contact with the skin. Do not inhale dust, fumes or gases that arise from the welding process.

#### 6.2 ENVIRONMENTAL PRECAUTIONS

...
SAFETY DATA SHEET

Collect powder from welding operations using a vacuum cleaner or by gentle sweeping to keep dust away from drains, surface and ground water. Prevent particulates from entering watercourses or drains. Avoid formation of dust clouds.

6.3 METHODS AND MATERIAL FOR CONTAINMENT AND CLEANING UP

In the case of a release of solid welding consumable products, solid objects can be picked up and placed into a disposal container. Collect powder from welding operations using a vacuum cleaner or by gentle sweeping. If airborne dust and/or fume is present, use adequate engineering controls and, if needed, personal protection to prevent overexposure. Refer to recommendations in Section 8. Wear proper personal protective equipment while handling. Do not discard as general trash.

6.4 REFERENCE TO OTHER SECTIONS

Refer to Section 8.

SECTION 7 - HANDLING AND STORAGE

7.1 PRECAUTIONS FOR SAFE HANDLING

No specific requirements in the form supplied. Handle with care to avoid cuts. Wear gloves when handling welding consumables. Avoid exposure to dust. Do not ingest. Avoid breathing welding fumes. Keep your head out of the fumes. Use with enough ventilation or exhaust at the arc, or both, to keep fumes and gases below the occupational exposure limits in your breathing zone and the general area. Use air sampling to determine the need for corrective action. (Refer to Section 10 for additional information). Some individuals can develop an allergic reaction to certain materials. Retain all warning and product labels.

7.2 CONDITIONS FOR SAFE STORAGE, INCLUDING ANY INCOMPATIBILITIES

Store in a dry area to protect product quality. Keep separate from acids and strong bases to prevent possible chemical reactions.

7.3 SPECIFIC END USE(S)

Industrial uses: Solid welding wire

Professional uses: Solid welding wire

SECTION 8 - EXPOSURE CONTROLS/PERSONAL PROTECTION

8.1 CONTROL PARAMETERS

Read and understand the instructions and the labels on the packaging. Welding fumes are a varying mixture of airborne gases and fine particles which, if inhaled or swallowed, constitute a health hazard. The degree of risk will depend on the composition of the fume, concentration of the fume and duration of exposure. The fume composition is dependent upon the material being worked, the process and consumables being used, coatings on the work such as paint, galvanizing or plating, oil or contaminants from cleaning and degreasing activities. A systematic approach to the assessment of exposure is necessary, taking into account the particular circumstances for the operator or nearby coworkers who could be exposed. One recommended way to determine the composition and quantity of fumes and gases to which workers are exposed is to take an air sample inside the welder’s helmet, if worn, or in the worker’s breathing zone.

Welding fumes do not have a specific European Union (EU) Occupational Exposure Limit (OEL). The most stringent available EU member nation 8-hour Threshold Limit Value (TLV) for Particulates-Not Otherwise Regulated (PNOR) is provided by Belgium at 10 mg/m3 and at 3 mg/m3 for PNOR as a respirable fraction. The individual complex compounds within the fume may have a lower OEL than the Belgium PNOR limit value. An Industrial Hygienist and/or the EU member nation should be consulted to determine the specific fume constituents present and their respective exposure limits. The GESTIS International Limit Value database at the website http://limitvalue.ifadgu.de/WebForm.jsp2.aspx may be accessed for international OELs for chemical agents. European Union OELs are listed below for EU countries to which Hobart Brothers distributes product. All exposure limits are in milligrams per cubic meter (mg/m3).

INGREDIENT

| CHROMIUM (metal &/or insoluble salts) (Cr (II) & Cr(III) compounds) |
| CAS | EINECS | EU OEL |
| 7440-47-3 | 231-157-5 |
| 7440-47-3 | 231-157-5 | TLV: 0.5 (as Cr) – Finland; TLV: 0.5 – The Netherlands; TLV: 0.5 (Inhalable fraction) – Switzerland; |

IRON+ 7439-89-6 231-096-4

IRON OXIDE 7493-96-5 215-168-2

MANGANESE+++ 7439-96-5 215-168-2

MOLYBDENUM (Cmpds as Mo) 7439-98-7 231-101-5

MOLYBDENUM (Cmpds as Mo, soluble) 7439-98-7 231-101-5

SILICON+ 7440-21-3 231-130-8

TITANIUM 7440-32-6 231-142-3

HEXAVALENT CHROMIUM 1333-82-0 215-607-8

TRIOXIDE (Fume constituent)
SAFETY DATA SHEET

R* - Respirable Aerosol; I* - Inhalable Aerosol; + - as oxide, fume, or respirable dust; ++ - as fume, or respirable dust; +++ - Crystalline silica is bound within the product as it exists in the package. However, research indicates silica is present in welding fume in the amorphous (non-crystalline) form; AGS - Ausschuss für Gefahrstoffe (German Committee on Hazardous substances); DFG- Deutsche Forschungsgemeinschaft (German Research Foundation); TLV - Threshold Limit Value; STLV - Short Term Limit Value; EINECS - European Inventory of Existing Commercial Chemical Substances.

8.2 EXPOSURE CONTROLS
VENTILATION: Use enough ventilation or local exhaust at the arc or both to keep the fumes and gases below the TLV/OELS in the worker’s breathing zone and the general area. Train the welder to keep his head out of the fumes.

RESPIRATORY PROTECTION: Use a fume respirator or air-supplied respirator approved by the EU Member State agency responsible for personal protective equipment certification under Directive 89/686/EEC (list available upon request) when welding in confined space or where local exhaust or ventilation does not keep exposure below the regulatory limits.

EYE PROTECTION: Wear helmet or use face shield with filter lens for open arc welding processes. As a rule of thumb begin with Shade Number 14. Adjust if needed by selecting the next lighter and/or darker shade number. Provide protective screens and flash goggles, if necessary, to shield others from the weld arc flash.

PROTECTIVE CLOTHING: Wear hand, head and body protection which help to prevent injury from radiation, sparks and electrical shock. At a minimum this includes welder’s gloves and a protective face shield, and may include arm protectors, aprons, hats, shoulder protection as well as dark non-synthetic clothing. Train the welder not to touch live electrical parts and to insulate himself from work and ground.

PROCEDURE FOR CLEANUP OF SPILLS OR LEAKS: Not applicable

SPECIAL PRECAUTIONS (IMPORTANT): When welding with electrodes that require special ventilation (such as stainless or hard facing, or other products which require special ventilation, or on lead- or cadmium-plated steel and other metals or coatings like galvanized steel, which produce hazardous fumes) maintain exposure below the TLV/OEL. Use industrial hygiene monitoring to ensure that your use of this material does not create exposures which exceed TLV/OEL. Always use exhaust ventilation. Refer to the following sources for important additional information: EU OSHA - European Agency for Safety and Health at Work OSHwiki database, Dust and aerosols – welding fumes, last modified 17 May 2013, retrieved 4 August 2015.

9.1. INFORMATION ON BASIC PHYSICAL AND CHEMICAL PROPERTIES
Welding consumables applicable to this sheet are nonreactive, nonflammable, non-explosive and essentially nonhazardous until welded.

PHYSICAL STATE: Solid
APPEARANCE: Round, Solid Wire
COLOR: Gray or Copper-colored
ODOR: Odorless
ODOR THRESHOLD: Not Applicable
pH: Not Applicable
MELTING POINT/FREEZING POINT: Not Available
INITIAL BOILING POINT AND BOILING RANGE: Not Available
FLASH POINT: Not Available
EVAPORATION RATE: Not Applicable
FLAMMABILITY (SOLID, GAS): Not Available
UPPER/LOWER FLAMMABILITY OR EXPLOSIVE LIMITS: Not Available
VAPOR PRESSURE: Not Applicable
VAPOR DENSITY: Not Applicable
RELATIVE DENSITY: Not Available
SOLUBILITY: Not Available
PARTITION COEFFICIENT: N-OCTANOL/WATER: Not Applicable
AUTO-IGNITION TEMPERATURE: Not Available
DECOMPOSITION TEMPERATURE: Not Available
VISCOSITY: Not Applicable
EXPLOSIVE PROPERTIES: Not Available
OXIDIZING PROPERTIES: Not Available

9.2 OTHER INFORMATION
No other physical or chemical parameters are necessary for welding wire.

10.1 REACTIVITY
Welding consumables applicable to this sheet are solid, stable, and nonvolatile as shipped.

10.2 CHEMICAL STABILITY
This product is stable under normal conditions.

10.3 POSSIBILITY OF HAZARDOUS REACTIONS
Contact with acids or strong bases may cause generation of gas. See also Section 8.

10.4 CONDITIONS TO AVOID
This product is only intended for use per the welding parameters it was designed for.

10.5 INCOMPATIBLE MATERIALS
Contact with acids or strong bases may cause generation of explosive gases (e.g., hydrogen).

10.6 HAZARDOUS DECOMPOSITION PRODUCTS
When this product is used for welding, hazardous fumes may be created. Other factors to consider include the base metal, base metal preparation and base metal coatings. All of these factors can contribute to the fume and gases generated during welding. The amount of fume varies with the welding parameters. When the wire is consumed, the fume and gas decomposition products generated are different in percent and form than ingredients in the manufactured product. Decomposition products of normal operation include those originating from the volatilization reaction, or oxidation of the materials shown in Section 3, plus those from the base metal and coating, etc., as noted above.

11.1 INFORMATION ON TOXICOLOGICAL EFFECTS
Potential Health Effects: Welding consumables are not hazardous until welded.

Electric arc welding may create one or more of the following health hazards:

Short-Term (Acute) Overexposure Effects: Welding Fumes - May result in discomfort such as dizziness, nausea or dryness or irritation of nose, throat or eyes. Chromium - Inhalation of fume with chromium (VI) compounds can cause irritation of the respiratory tract, lung damage and asthma-like symptoms. Swallowing chromium (VI) salts can cause severe injury or death. Dust on skin can form ulcers. Eyes may be burned by chromium (VI) compounds. Allergic reactions may occur in some people. Copper - Metal fume fever

Other Effects: May result in discomfort such as dizziness, nausea or dryness or irritation of nose, throat or eyes. 11.2 INFORMATION ON REVERSE PATHWAYS
No reverse pathways are known in the manufacturing process, and therefore no reverse pathways are presented.
SAFETY DATA SHEET

categorized by metallic taste, tightness of chest and fever. Symptoms may last 24 to 48 hours following overexposure. Iron, Iron Oxide - None are known. Treat as nuisance dust or fume. Manganese - Metal fume fever characterized by chills, fever, upset stomach, vomiting, irritation of the throat and aching of body. Recovery is generally complete within 48 hours of the overexposure. Molybdenum - Irritation of the eyes, nose and throat. Nickel, Nickel Compounds - Metallic taste, nausea, tightness in chest, metal fume fever, allergic reaction. Silica (Amorphous) - Dust and fumes may cause irritation of the respiratory system, skin and eyes. Titanium Dioxide - Irritation of respiratory system. Zirconium - May cause irritation of the eyes, nose and throat due to mechanical effects.

Long-Term (Chronic) Overexposure Effects: Welding Fumes - Excess levels may cause bronchial asthma, lung fibrosis, pneumoconiosis or "siderosis." Studies have concluded that there is sufficient evidence for ocular melanoma in welders. Chromium - Ulceration and perforation of nasal septum. Respiratory irritation may occur with symptoms resembling asthma. Studies have shown that chrome production workers exposed to hexavalent chromium compounds have an excess of lung cancers. Chromium (VI) compounds are more readily absorbed through the skin than chromium (III) compounds. Good practice requires the reduction of employee exposure to chromium (III) and (VI) compounds. Copper - Copper poisoning has been reported in the literature from exposure to high levels of copper. Liver damage can occur due to copper accumulating in the liver characterized by cell destruction and cirrhosis. High levels of copper may cause anemia and jaundice. High levels of copper may cause central nervous system damage characterized by nerve fiber separation and cerebral degeneration. Iron, Iron Oxide Fumes - Can cause siderosis (deposits of iron in lungs) which some researchers believe may affect pulmonary function. Lungs will clear in time when exposure to iron and its compounds ceases. Iron and magnetite (Fe3O4) are not regarded as fibrogenic materials. Manganese - Long-term overexposure to manganese compounds may affect the central nervous system. Symptoms may be similar to Parkinson's disease and can include slowness, changes in handwriting, gait impairment, muscle spasms and cramps and less commonly, tremor and behavioral changes. Employees who are overexposed to manganese compounds should be seen by a physician for early detection of neurologic problems. Overexposure to manganese and manganese compounds above safe exposure limits can cause irreversible damage to the central nervous system, including the brain, symptoms of which may include slurred speech, lethargy, tremor, muscular weakness, psychological disturbances and spastic gait. Molybdenum - Prolonged overexposure may result in loss of appetite, weight loss, loss of muscle coordination, difficulty in breathing and anemia. Nickel, Nickel Compounds - Lung fibrosis or pneumoconiosis. Studies of nickel refinery workers indicated a higher incidence of lung and nasal cancers. Silica (Amorphous) - Research indicates that silica is present in welding fume in the amorphous form. Long term overexposure may cause pneumoconiosis. Noncrystalline forms of silica (amorphous silica) are considered to have little fibrotic potential. Titanium Dioxide - Pulmonary irritation and slight fibrosis.

Medical Conditions Aggravated By Exposure: Persons with pre-existing impaired lung functions (asthma-like conditions). Persons with a pacemaker should not go near welding and cutting operations until they have consulted their doctor and obtained information from the manufacturer of the device. Respirators are to be worn only after being medically cleared by your company-designated physician.

Emergency And First Aid Procedures: Call for medical aid. Employ first aid techniques recommended by the International Red Cross. If irritation or flash burns develop after exposure, consult a physician.

Carcinogenicity: Chromium VI compounds, nickel compounds, silica (crystalline quartz), ultraviolet radiation and welding fumes are classified as IARC1 Group 1. Nickel metal/alloys are classified as an IARC Group 2B carcinogen.

E – International Agency for Research on Cancer (1 – Carcinogenic to Humans, 2B – Possibly Carcinogenic to Humans, 3 – Not Classifiable as to its Carcinogenicity to Humans, 4 Probably Not Carcinogenic to Humans Σ – Chromium Metal and Chromium III Compounds ΣΣ – Chromium VI β – Nickel metal and alloys ββ – Nickel compounds VI – Silica Crystalline α-Quartz --- Dashes indicate the ingredient is not listed with the IARC.

SECTION 12 – ECOLOGICAL INFORMATION

12.1 TOXICITY
No environmental toxicity data is available for the solid product. Welding processes can release fumes directly to the environment.

12.2 PERSISTENCE AND DEGRADABILITY
Welding wire can degrade if left outside and unprotected.

12.3 BIOACCUMULATIVE POTENTIAL
Residues from welding consumables and processes could degrade and accumulate in the soil and groundwater.

12.4 MOBILITY IN SOIL
Welding wire and rods are not soluble in water or soil. Particles formed by working welding wire or rods can be transported in air or water.

12.5 RESULTS OF PBT AND vPvB ASSESSMENT
No REACH Chemical Safety Report is required for welding wire or rods; however, neither the welding wire or electrode itself nor the substances of which it consists meets the criteria for PBT (persistent, bioaccumulative and toxic) or vPvB (very persistent and very bioaccumulative) in accordance with REACH, Annex XIII.

12.6 OTHER ADVERSE EFFECTS
In solid form, welding wire and electrodes present no hazards to the environment. Particles and ions can, nevertheless, enter the environment by means of dust or smoke from welding operations, or by chemical liberation due to erosion thereby introducing iron or heavy metals into the ground or water.

SECTION 13 – DISPOSAL CONSIDERATIONS

13.1 WASTE TREATMENT METHODS
Non-contaminated waste from production and welding wires or rods is recyclable. Use recycling procedures if available. The unused product is not classified as hazardous waste. Any residues of finely-divided product (particles, dust, fumes) may be regarded as Hazardous Waste, depending on local regulations. Discard any product, residue, packaging, disposable container or liner in an environmentally acceptable manner, in full compliance with regional, national, and European regulations. Waste codes should be assigned by the user, preferably in discussion with the waste disposal authorities.
SAFETY DATA SHEET

SECTION 14 – TRANSPORT INFORMATION

14.1 UN NUMBER
Welding wires and electrodes are not classified as dangerous goods for transport and have no UN number. No international regulations or restrictions are applicable. No special precautions are necessary.

14.2 UN PROPER SHIPPING NAME
Not regulated.

14.3 TRANSPORT HAZARD CLASS(S)
Not regulated.

14.4 PACKING GROUP
Not regulated.

14.5 ENVIRONMENTAL HAZARDS
Not regulated.

14.6 SPECIAL PRECAUTIONS FOR USER
None.

14.7 TRANSPORT IN BULK ACCORDING TO ANNEX II OF MARPOL 73/78 AND THE IBC CODE
Not applicable – product is transported only in packaged form.

SECTION 15 – REGULATORY INFORMATION

15.1 SAFETY, HEALTH AND ENVIRONMENTAL REGULATIONS/LEGISLATION SPECIFIC FOR THE SUBSTANCE OR MIXTURE
Read and understand the manufacturer’s instructions, your employer’s safety practices and the health and safety instructions on the label and the safety data sheet. Observe all local and national rules and regulations. Take all necessary precautions to protect yourself and others. This Safety Data Sheet was prepared in accordance with Regulations (EC) No 1907/2006 and No 1272/2008 of the European Parliament and Council. All the components in this product are listed on the European Inventory of Existing Commercial Chemical Substances (EINECS) for the European Union or are exempt.

15.2 CHEMICAL SAFETY ASSESSMENT
No Chemical Safety Assessment has been carried out for this substance/mixture by the supplier.

SECTION 16 – OTHER INFORMATION

The following Hazard Statements, provided in Annex I of (EC) No 1272/2008 (CLP) correspond to the columns labeled ‘GHS Hazard Statements’ within Section 3 of this safety data sheet. Take appropriate precautions and protective measures to eliminate or limit the associated hazard:

H271: May cause fire or explosion; strong oxidizer
H301: Toxic if swallowed
H302: Harmful if swallowed
H311: Toxic in contact with skin
H314: Causes severe skin burns and eye damage
H317: May cause an allergic skin reaction
H319: Causes serious eye irritation
H330: Fatal if inhaled
H332: Harmful if inhaled
H334: May cause allergy or asthma symptoms or breathing difficulties if inhaled
H335: May cause respiratory irritation
H340: May cause genetic defects
H350: May cause cancer
H351: Suspected of causing cancer
H361f: Suspected of damaging fertility or the unborn child
H372: Causes damage to organs through prolonged or repeated exposure
H373: May cause damage to organs through prolonged or repeated exposure
H400: Very toxic to aquatic life.
H410: Very toxic to aquatic life with long lasting effects
H412: Harmful to aquatic life with long lasting effects
